

GSE136103 UMAP before and after QC filtering
Note: batch correction with Harmony is applied in script 02 not here

BEFORE QC

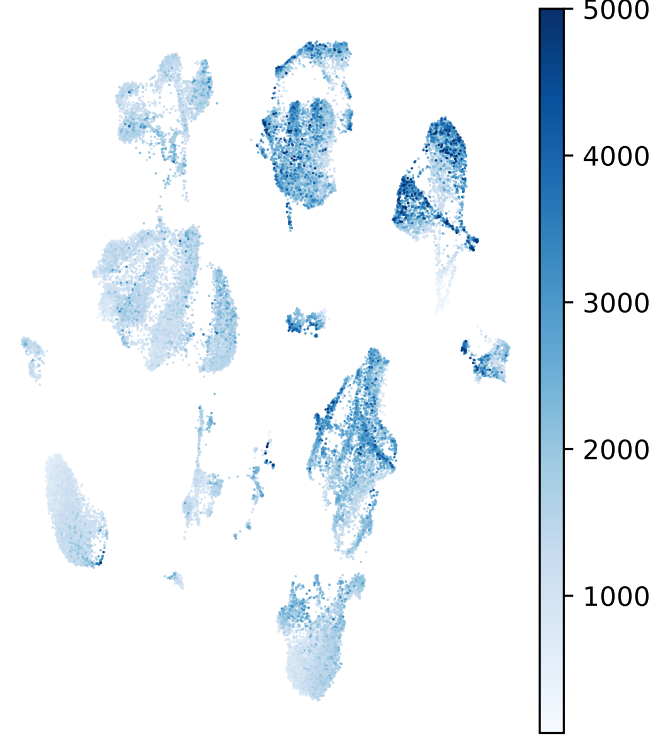

MT percent (high means dying cell)

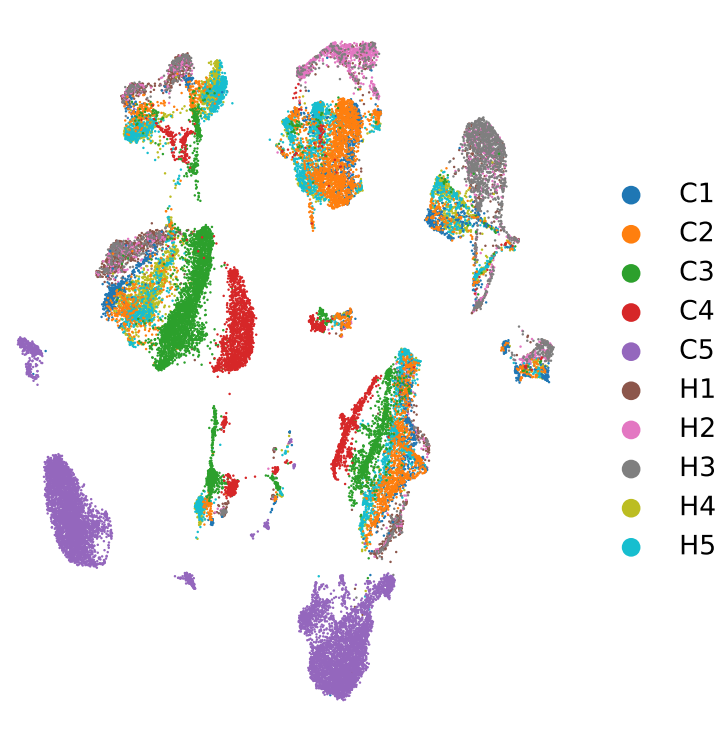

Doublet score (high means two cells)

Genes per cell (low means empty droplet)

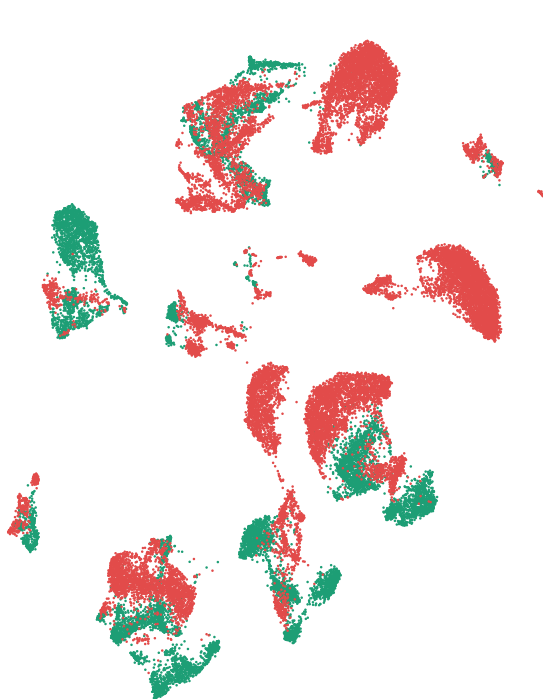

Donor (batch structure before Harmony)

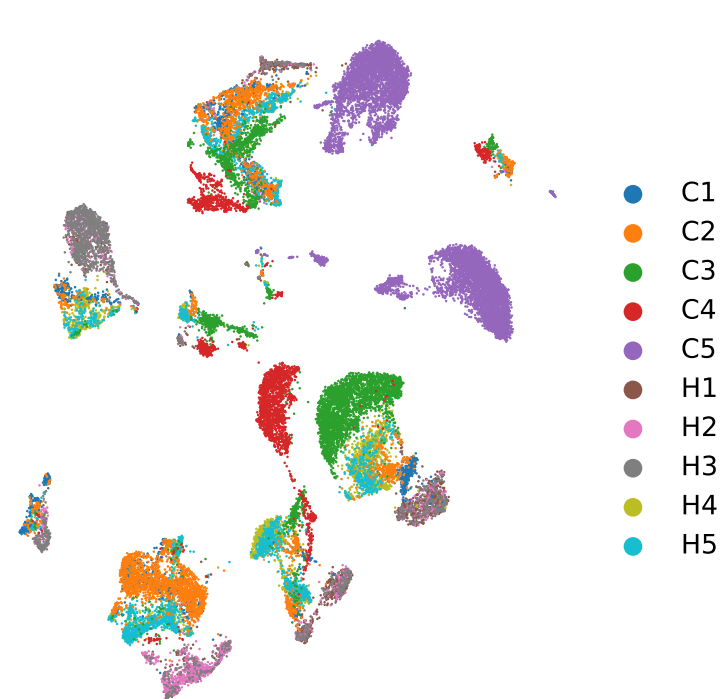

AFTER QC

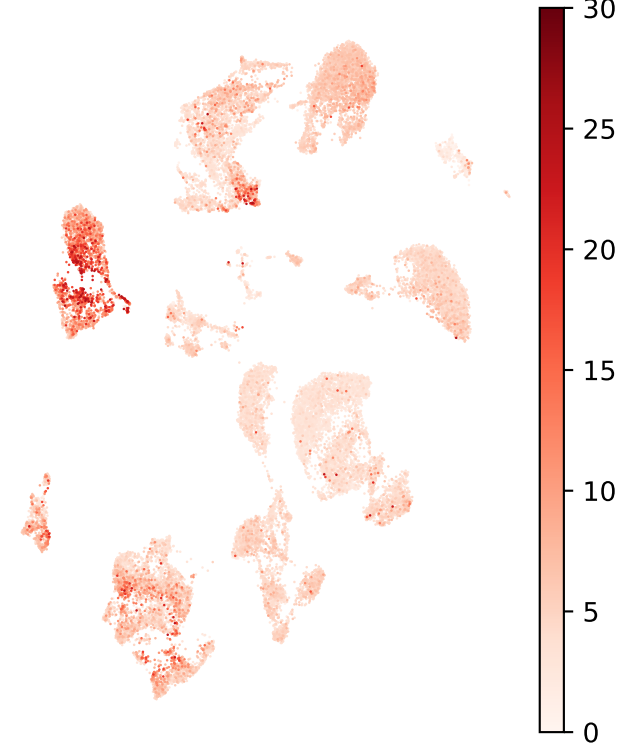

Condition healthy vs cirrhotic

Donor (batch before Harmony correction)

MT percent after filtering should be under 25

Genes per cell after filtering
